

Customer Invoice Aging Analysis

Project Overview

This project is an Excel-based **Customer Invoice Aging Analysis** designed to monitor outstanding customer balances and identify overdue invoices.

The report organizes customer invoice balances into aging categories based on the number of days outstanding:

0–30 Days

31–60 Days

61–90 Days

91+ Days

This analysis helps businesses monitor accounts receivable, prioritize collections, and improve cash-flow management.

Business Objective

The main objective of this project is to provide a clear view of outstanding customer invoices and answer questions such as:

Which customers have the highest outstanding balances?

Which invoices are overdue?

How much of the total balance falls into each aging category?

Which customer accounts should be prioritized for collection?

Project Files

Customer Invoice Aging Analysis.xlsx — Main Excel workbook containing the aging report and analysis.

Screenshots/ — Images showing the report, dashboard, and key analysis.

Skills Demonstrated

Microsoft Excel

Data Analysis

Accounts Receivable Analysis

Financial Reporting

Invoice Aging

PivotTables

Data Organization and Cleaning

Business Analysis

Key Features

Customer-level outstanding balance analysis

Invoice and transaction tracking

Aging classification

Overdue balance identification

Summary reporting

PivotTable-based analysis

Visual reporting and charts

Business Value

The report can help finance and operations teams identify overdue receivables and focus collection efforts on high-risk or long-outstanding balances.

By providing a structured view of receivables, the analysis supports better decision-making related to:

Cash-flow monitoring

Collection prioritization

Customer credit monitoring

Accounts receivable management
